Technical Commentary:

UWC has broken out of its Triangle Pattern and continues to trade above its short- and medium-term moving averages. MACD remains positive and the RSI at 64.1 is trending higher, suggesting strengthening momentum. A sustained hold above the breakout zone, within the confines of the rising channel, could trigger another leg higher.

We expect further upside towards **RM7.56** and **RM7.80**, while the stop-loss is set at **RM6.54**.

Technical Commentary:

TMK is testing the upper boundary of an Ascending Triangle pattern, with today's mild pullback holding above its resistance-turned-support line. The MACD remains in positive territory and RSI continues to hold above the midline, reflecting resilient underlying momentum despite the near-term dip. A sustained hold above the resistance-turned-support level could confirm a continuation of the prevailing uptrend.

We expect further upside towards **RM3.04** and **RM3.20**, while the stop-loss is set at **RM2.62**.
